Replit Proof of Use

Project: RePath | Prepared: 2026-10-25 02:05 UTC+8

1. Purpose and evidence

Team Gravity used Replit to review RePath's deployment and investigate the packaging and loading of its logo assets. The original team-supplied screenshot on page 2 shows the project workspace, Replit Agent activity and published deployment URL. This document follows the project/deployment evidence route in the Participant Handbook.

2. Project and platform identifiers

Replit project	RePath-design-refresh
Account path	@wt365789 - visible in the screenshot address bar.
Project URL	https://replit.com/@wt365789/RePath-design-refresh
Live deployment	https://re-path-design-refresh--wt365789.replit.app/
Visible activity	Replit Agent activity groups labelled 3 actions and 15 actions; messages investigate asset paths and logo packaging in the published build.
Publishing evidence	Publish Overview / Preview / Republish controls and the deployment URL are visible in the screenshot.

3. Live deployment check

At the recorded verification time, the Replit deployment opened in a browser without requiring a Replit account login. The following synthetic-data route completed: home - View sample - Career directions - View preparation plan - Generate my action plan. The result displayed Management Analyst, an 88/100 reference match score and a plan estimated at seven weeks with six hours per week.

Verification date/time: 2026-10-25 02:05 UTC+8. This confirms the tested deployment route at that time; it does not establish future uptime or byte-for-byte identity with the GitHub source.

4. Evidence scope

The attachment supports actual Replit project activity and a published Replit deployment. It does not establish a numeric amount of credits consumed, that credits were exhausted, or that every proposed fix was completed. No numeric credit-use claim is made here. The private editor link may require an invitation; the deployment URL is the tested product entry.

Evidence received from the team on 25 October 2026. The screenshot's original capture time was not supplied. Image SHA-256:

`94f342fed7d82697993ce9c282420d384720c9a38adcd6acb8fc7a025db7d41e`

Rule reference: Participant Handbook, sections 9.3 and 10.6.

Evidence attachment - original Replit workspace screenshot

Team-supplied image. No screen content was altered. Account path, project activity and publishing panel are visible.
