SDC HACKATHON 2026

Technical & Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club
Submission Deadline: 25 October 2026, 07:59:59 MYT (UTC+8)

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

1. Team & Project Overview

Team Name	gravity
Project / Solution Name	repath
Name (Leader)	WU TONG
Email & Phone (Leader)	MAT2609046@xmu.edu.my +601117563424
University Affiliation(s)	Xiamen University Malaysia (XMUM)
Live Prototype URL	https://repath-ai-0-2.lianghuihu.chatgpt.site/
Code Repository URL (public / access granted to judges)	https://github.com/mont365789/SDC-hackathon-2026-gravity

2. Architecture & Technology Stack

2.1 System Architecture Overview

Describe how the components declared in this document connect end-to-end (e.g., user interface → backend → AI model/API → database → cloud hosting). Attach a system block diagram as an appendix if available.

[Maximum 200 words]

RePath 0.2 is a static web prototype hosted through ChatGPT Sites. HTML, CSS, native JavaScript ES modules and SVG provide the interface. JavaScript rules calculate personal career matches and action plans; no GenAI model or API is called at runtime. Profiles and learning records remain in browser localStorage. The application reads saved DOSM quarterly excerpts and selected O*NET occupation/task records, links to the WEF report, and supports arXiv RSS refresh. DOSM informs market observations and local-trend sorting; WEF and arXiv do not affect personal matching scores. Google Fonts optionally supplies DM Sans and Noto Sans SC, with system-font fallback. Learning resources link to Microsoft Learn and OpenLearn. Local serving requires Node.js 20 or later; the source has no external npm dependencies. Original application code is Apache-2.0. ChatGPT, Codex, image_gen and Replit support development and review.

2.2 Languages, Frameworks & Libraries

List the main programming languages, frameworks, and third-party libraries that your team did not create. Open-source use is permitted provided it is declared and properly licensed/attributed.

Name & Version	Purpose in Project	License
HTML and CSS	Page structure, layout and styling. No pre-existing website templates, open-source projects or copied third-party code snippets were incorporated.	Web standards; no separate third-party library.
JavaScript ES modules; localStorage and Fetch	Client-side interactions, matching rules, action plans, browser storage and remote-data retrieval.	Web standards and built-in browser APIs.
SVG; JSON and RSS	Vector assets, stored data and research-feed formats.	Web/data standards; source terms apply to content.
Node.js >=20 Replit preset: nodejs-22 Python 3 and PowerShell Exact local utility builds unrecorded	Local serving, development scripts, the existing Node test runner, data processing and shell commands. Utility binaries are not redistributed.	Node.js: MIT plus bundled notices. Python: PSF License v2. PowerShell: licence for the installed edition; open-source editions use MIT. Node.js licence Python licence PowerShell licence
Git Version unrecorded GitHub Pro managed service	Version control and project-source repository.	Git: GNU GPL v2. GitHub: service terms. Git licence GitHub terms
CUA and Playwright Managed tooling; exact builds unrecorded	Browser automation and interface testing.	CUA: OpenAI service terms. Playwright: Apache License 2.0. OpenAI policies Playwright licence
DM Sans and Noto Sans SC Google Fonts hosted releases	Optional interface fonts, delivered remotely. System fonts provide fallback; no font binaries are included in the source export.	SIL Open Font License 1.1. DM Sans licence Noto Sans SC licence

3. APIs & Cloud Services

3.1 External APIs

List every external API your solution calls (GenAI, maps, payments, messaging, data feeds, etc.). Do not include API keys or secrets in this document.

API & Provider	Purpose in Project	Access Tier (free / paid / sponsor-provided)
arXiv cs.AI RSS	Retrieves AI research feed entries and supports manual refresh. The current published cache contains 0 papers and displays a no-new-entries message.	Free public RSS

3.2 Cloud Platforms & Deployment

List every cloud service used for hosting, storage, databases, authentication, or compute, and indicate how the prototype is deployed.

Service & Provider	Purpose in Project	Plan / Region
Sites / OpenAI	Saved website versions, publication and hosting of the static prototype.	ChatGPT built-in publishing and hosting; no separately purchased hosting plan. Deployment region not specified by the team.
GitHub	Project-source repository for submission and judge review.	GitHub Pro - existing paid plan; no additional project-specific plan purchased. No server region selected by the team.
Google Fonts / Google	Optional remote delivery of DM Sans and Noto Sans SC.	Public hosted font service; no separately purchased plan.
Replit	Cloud development assistance, prototype review and refinements.	Official competition-provided credits; deployment region not selected by the team.

4. AI Tools, Models & Datasets

4.1 AI Models Used in the Solution

List every AI model embedded in or called by your application, including pre-trained, fine-tuned, and self-trained models.

Model & Version	Source / Provider	Usage (pre-trained / fine-tuned / self-trained)	License / Terms
None	Not applicable	No model embedded or called at runtime; matching and action plans use rules.	Not applicable

4.2 Datasets

List all datasets used for training, fine-tuning, evaluation, or in the running application. State clearly if a dataset contains personal or sensitive data.

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
DOSM Job Market Insights 2026 Q1 and Q2 Five job-advertisement categories	DOSM 2026 Q1 DOSM 2026 Q2	Public aggregate statistics Saved excerpt	DOSM / Government Open Data Terms of Use 1.0. Credit DOSM and the quarter; avoid implied endorsement. DOSM data terms	N
O*NET Database 31.0 Occupation and task tables 8 occupations; 3 tasks each	O*NET database	Public occupational reference Selected subset	CC BY 4.0. Credit O*NET 31.0 and USDOL/ETA. Identify label edits and custom skill mappings. O*NET licence CC BY 4.0	N

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
WEF The Future of Jobs Report 2025 Reference only; report dataset is not ingested	WEF report	Public report reference Static metadata and link	WEF terms; CC BY-NC-ND 4.0 unless specified. Citation/link only; no report redistribution. WEF licence	N
arXiv cs.AI RSS Research feed Current cache: 0 papers	arXiv cs.AI RSS	Public research feed Cached response	CC0 1.0 for metadata; API/RSS terms apply. No paper text redistributed. arXiv API terms	N
Synthetic test profiles	Created by the team for demo testing	Synthetic fictional people and work histories	Team-created synthetic test material; no third-party dataset license.	N

Source use: DOSM provides saved Q1/Q2 counts, quarterly changes and selected market references, and supports the local-trend sort. O*NET supplies occupation names and task evidence; the demo defines its own skill mappings and matching weights. WEF is a static reference showing the report title, publication date, brief description and official link. arXiv supports research-feed display and manual refresh. Personal match scores are calculated using demo rules. WEF and arXiv do not contribute to matching scores.

Data source: Department of Statistics Malaysia. Occupational reference: O*NET® 31.0 Database, U.S. Department of Labor, Employment and Training Administration, under CC BY 4.0. Label changes and independent skill mappings are by gravity and do not indicate agency endorsement. Report reference: World Economic Forum, The Future of Jobs Report 2025.

4.3 AI-Assisted Development Tools

Tools used to help write code, design, content, or documentation (e.g., chat assistants, code completion tools, image generators). Declaring these tools does not reduce your score; undeclared use may.

Did your team use any generative-AI tool to help create code, design, text, or other project material?

☒ Yes ☐ No

If yes, list them below:

Tool & Version	**Used For**	**Extent of Use (minor / moderate / major)**
ChatGPT GPT-6.1 SOL	Project ideation, requirements clarification, submission documents and initial demo generation.	Major
OpenAI Codex GPT-6 series	Page design, source-code generation, interactions, data integration and fixes.	Major
OpenAI image_gen GPT Image 2	Logo editing and transparent-background asset preparation.	Minor
Replit	Reviewing the existing prototype and assisting with product refinements and additions, using official competition-provided credits.	Minor

Briefly describe how your team reviewed, tested, and took responsibility for AI-generated output:

[Maximum 100 words]

The team manually tested experience entry, career matches and improvement suggestions and reported smooth use. We checked source provenance and cached evidence against the declared roles of DOSM, O*NET, WEF and arXiv. The supplied 0.2 source export passed all 29 existing automated tests, covering matching, plans, records, quarterly comparisons and empty/offline RSS handling. A targeted scan of 54 text files in that export found no common credential patterns; Git history was outside the scan.

5. Sponsor-Provided Resources

Declare any official SDC sponsor-provided GenAI API, cloud credits, tools, mentoring, or data that your team used.

Did your project use any official SDC sponsor-provided resource?

☒ Yes ☐ No

If yes, list them below:

Sponsor	Resource (API / credits / platform / data)	How It Was Used in the Project
SDC Hackathon organizers	Official one-to-one mentor session 23 October 2026	Advice on target-user focus, differentiation, validating needs, the business model and preparing a demo.
SDC Hackathon official resource allocation	Replit AI-tool credits provided through the competition	The team used the official credits to review the existing product and assist with refinements and additions.

Was the sponsor resource essential to the core functionality of the prototype, or could it be replaced? Explain briefly:

[Maximum 100 words]

Official mentoring informed project positioning, user validation and demo priorities. Competition-provided Replit credits supported product review and refinement during development. These resources supported the development process rather than acting as runtime dependencies. The submitted prototype can run independently of the mentor session and without spending Replit AI credits. Other development tools could provide comparable review assistance.

Replit usage evidence

Replit project history or deployment URL: _____

Alternatively, attach a credit-use record identifying the team's own account and project, as required by the Participant Handbook, Section 10.6.

6. Security, Privacy & Responsible Use

6.1 Data Handling & Privacy

What user or personal data does your application collect, store, or send to third-party services (including AI APIs)? How is it protected, and how long is it kept? State "No user data is collected" if applicable.

[Maximum 150 words]

Testing used fictional people and work histories; no real resumes were used. Profiles and learning records remain in the current browser localStorage, without application-level encryption, until the user clears them. Users can delete records in Record Management using Clear Data, or clear browser site data. Profile contents are not uploaded to a server or AI service, and no GenAI API is called. Requests for optional Google Fonts and the arXiv feed can disclose ordinary connection metadata, such as IP address and browser headers, to those providers. External learning links open provider websites under their own privacy terms.

6.2 Known Limitations & Risks

Identify the main technical limitations of your AI components (e.g., hallucination, bias, rate limits, dependency on a single provider) and any mitigation you have implemented.

[Maximum 150 words]

Personal match scores use demo-defined rules and weights; they are not validated hiring probabilities. DOSM covers a limited excerpt of online job advertisements and does not establish AI-driven job losses. O*NET is a US occupational reference; this demo retains only eight occupations with three tasks each and uses its own skill mappings. WEF is a static report reference. arXiv may return no entries; the current published cache contains zero papers and the interface reports this state. WEF and arXiv do not affect matching scores.

7. Compliance & Readiness Checklist

Tick all boxes that apply before submitting.

☐ All APIs, cloud services, AI tools, models, and datasets used in the project are declared in this document.

☐ All third-party code, datasets, and models are used in accordance with their licenses, and attribution is provided where required.

☐ No API keys, passwords, or other credentials are exposed in the code repository, prototype, or this document.

☒ Any use of generative-AI tools for development has been disclosed and reviewed by the team.

☒ Any use of official SDC sponsor resources has been declared in Section 5.

☐ The prototype described here is accessible to judges through the links provided in Section 1.

☐ All fields in this template have been completed within the word limits stated.

8. Declaration

By submitting this document, the team leader confirms that the information provided is complete and accurate to the best of the team's knowledge, and that every API, cloud service, AI tool, dataset, model, and sponsor resource used in the project has been declared.
